Restarting High-grade Gold Mining at the Mon Gold Mine in the Yellowknife Greenstone Belt

Caution

**SIXTY NORTH GOLD
MINING LTD.**

Sixty North Gold Mining Ltd. is a British Columbia company ("the Company"). All statements in this presentation are made as at October 1, 2026. This presentation contains "forward-looking statements" within the meaning of applicable securities laws, including statements relating to proposed or anticipated work programs, plans for development of the Mon Property, and/or anticipated financings. Actual results and developments may differ materially from those contemplated by these statements. Factors which may lead the Company to not proceed with anticipated work programs, construction or development projects and studies include factors such as analysis of the exploration results may lead to a determination that further exploration or development is not warranted, delays by weather and other constraints, insufficient funding, delays as a result of early or late onset of winter conditions, availability of personnel and equipment to conduct work programs, a decline in precious metals prices, permit reviews, information requests and other factors not within the Company's control, changes in market conditions, and insufficient financing to complete work programs. Factors that could cause the Company to not proceed with, or reduce or increase, anticipated financings include change in market conditions and changes in the Company's exploration and development plans.

If the Company is unable to complete future financings, the Company may have to delay or alter its operations plans. The factors identified above are not intended to represent a complete list of the factors that could affect the Company. Although the Company has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended.

There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. The Company does not undertake to update forward-looking statements, except where required by law. Readers should not place undue reliance on forward-looking statements.

No Mineral Reserves or Mineral Resources as defined within the meaning of NI 43-101 have been established on the Mon Gold Property. No Preliminary Assessment (PA), Preliminary Feasibility (PFS), or Feasibility Study (FS) has been completed on the property, and the Company does not anticipate that its work programs will result in the establishment of mineral resources, mineral reserves, or an economic study, on the Mon Gold Property. Readers are cautioned that, as not all risks may have been identified at the time of a production decision is made, mineral properties developed in the absence of a PFS and FS have a higher risk of failure. Investors should consider the investment in securities of the Company as a speculative investment.

Technical information in this presentation has been prepared and reviewed by Dr. Dave R Webb, Ph.D., P.Geol., P.Eng., who is a qualified person for the purposes of NI 43-101, and is the President & CEO of Sixty North Gold Mining Ltd.. The August 3, 2023 Technical Report Form NI 43-101F1 was prepared by Dr. D.R. Webb, Ph.D., P.Geol., P.Eng., qualified person for the purposes of NI 43-101 who is not independent of the Company.

Most mining startups are focused on expensive exploration programs and feasibility studies in the hopes of de-risking a project and selling out to a larger company. Chester Millar prefers to skip drilling and start mining. **“My Feasibility Study is done by doing things. I will actually mine and produce gold. That to me is better than any Feasibility Study because it isn’t a study, it’s proven fact.”**

Chester Millar is the founder of several multi-billion-dollar gold producers including Glamis Gold (bought by Goldcorp), Alamos Gold and Eldorado Gold. He was inducted into the Canadian Mining Hall of Fame in 2008. The 88 year old mine developer credits luck, experience and a simple strategy for his success.

Sixty North Gold Mining Ltd.'s plan to restart a permitted, high-grade, past producing gold mine:

- All mining and milling equipment, camp and supplies are on site.
- Construction (three months) and mining operations will begin when once all management plans are approved by the regulator Mackenzie Valley Land & Water Board, expected in 2027.
- Develop stopes (mining zones) and bring gold bearing vein material to surface. (Four weeks, operating for years)
- Sale of gold bars and concentrate (operating for years)

Development Plans

SIXTY NORTH GOLD
MINING LTD.

Continue Mine Development

- Access vein in 4 stopes - rescue method
- Build 2m x 2m raise
- Remove and stockpile high-grade vein
- Extend ramp down dip

Development Plans

SIXTY NORTH GOLD
MINING LTD.

In 2024 SXTY reopened North Ramp and reset services, extending it 44 m, with a crosscut accessing West Limb and East Limb of A-Zone, and discovering a new vein, the DD Zone

Development Plans

SIXTY NORTH GOLD
MINING LTD.

Continue to extend 3m x 4m Main Ramp to fold nose, and drive 3m x 3m crosscuts

Development Plans

SIXTY NORTH GOLD
MINING LTD.

Intersected DD-Zone Gold-Bearing Structure in Main Ramp

Key Operations Personnel

SIXTY NORTH GOLD
MINING LTD.

Dr. Dave R. Webb, Ph.D., P.Geol., P.Eng.

has over 40 years of experience, completed his M.Sc. and Ph.D. in Yellowknife. He discovered four gold deposits in Yellowknife (one into production, three to Feasibility Studies and permitting). He acquired the Mon Property in the late 1980's from Cominco Ltd. and developed it into production in the 1990's.

Rod Mckay

Mine Manager - Mon Gold mine project, has worked as a project superintendent on numerous underground mining projects, including responsibility for milling operations and exploration activities. He has more than 40 years of diversified work experience in all aspects of underground mine construction, operation and maintenance, including in the NWT.

Gerry V. Hess

Operations Advisor, is a former Mine Manager of the Mon Mine, and underground superintendent at four other mines in the Yellowknife area. He has been an independent mine contractor installing several kilometres of underground workings at various remote sites and has been a former contractor at one of the NWT's diamond mines.

- High-grade past producer in a high-grade gold belt
- Permitted for mining and milling
- Mining and milling equipment and supplies are on site
- Experienced mining operators and corporate management
- Mining and milling planned to commence 2027 for near term cash-flow, following approval of all management plans by MVLWB
- Future exploration potential on site, with gold shear zones and VMS silver, lead, zinc, gold, cobalt and antimony values

HISTORY - Yellowknife Gold Belt

East-facing Longitudinal Section through the Con Mine C-4 Shear Zone

SIXTY NORTH GOLD
MINING LTD.

C-4 Shear one is exposed with a 25 m long high-grade section exposed averaging 17 gpt across 1.2 metres within 11.4 gpt over 100 metres.

Fourteen diamond drill holes intersect the structure returning an average of 5.3 gpt gold across 2.2 metres.

Development led to 47,100 tonnes being mined from seven separate stopes.

The 47,100 tonnes graded 22.84 gpt gold recovering 34,500 ounces of gold. This works out to twice what the average surface grades were, 25% higher grade than the high-grade surface section, and almost five times the diamond drill grades.

**Clearly diamond drilling does not work in this situation!
This 6 million ounce deposit would not have been identified
without bulk sampling.**

HISTORY - Yellowknife Gold Belt

East-facing Longitudinal Section through the Discovery Mine

SIXTY NORTH GOLD
MINING LTD.

DISCOVERY MINE, 901 STOPE, PRODUCTION SAMPLES

High-grade gold is not homogenously distributed, rather it occurs in clusters of very concentrated grades
